Definition of Derivative. So I've got a problem written here on the board. So we're defining a function  $f$  of  $x$  to be  $1$  over the quantity  $1$  plus  $x$  squared. So what I'd like you to do is graph the function of the curve  $y$  equals  $f$  of  $x$  and to compute the derivative  $f$  prime of  $x$  from the definition.

Reference of \$20 between the market price of stock and the strike price. In practice, the latter is often the preferred method because no stock needs to change hands. As a result, the payoff of the call option, that is, its value at time 1 is a random variable.  $C(1) = 20$  if stock goes up, 0 if stock goes down.

Let us Find a Derivative! To find the derivative of a function  $y = f(x)$  we use the slope formula: Slope = Change in Y / Change in X =  $\hat{y}'\hat{x}$ . And (from the diagram) we see that: Now follow these steps: Fill in this

slope formula:  $\frac{f(x+h) - f(x)}{h}$ . Simplify it as best we can. Then make  $h$  shrink towards zero.

One of the most popular interest rate derivatives is interest rate swap. In one form, it involves a bank agreeing to make payments to a counterparty based on a floating rate in exchange for receiving fixed interest rate payments. It provides an extremely useful tool for banks to manage interest rate risk.

In the continuous case, the probability of a single outcome is always 0,  $P(\{x\}) = 0$ . However, it is enough to know the probabilities of  $\epsilon$ -intervals of the form  $[x, x + dx]$ , and we can calculate continuous probabilities as integrals of  $\epsilon$ -probability density functions, so-called pdfs.
