

### **biomaterials and devices for pdf**

A biomaterial is any substance that has been engineered to interact with biological systems for a medical purpose - either a therapeutic (treat, augment, repair or replace a tissue function of the body) or a diagnostic one. As a science, biomaterials is about fifty years old. The study of biomaterials is called biomaterials science or biomaterials engineering.

Bioceramics and bioglasses are ceramic materials that are biocompatible. Bioceramics are an important subset of biomaterials. Bioceramics range in biocompatibility from the ceramic oxides, which are inert in the body, to the other extreme of resorbable materials, which are eventually replaced by the body after they have assisted repair. Bioceramics are used in many types of medical procedures.

### **Bioceramic - Wikipedia**

Penta-galloylglucose (PGG) is a polyphenol that is composed of a d-glucose molecule with 5 gallic acid molecules (3, 4,5-trihydroxybenzoic acid). PGG similar to other polyphenols has a hydrophilic core with hydroxyl groups.
