The purpose of this page is to provide resources in the rapidly growing area of computer-based statistical data analysis. This site provides a web-enhanced course on various topics in statistical data analysis, including SPSS and SAS program listings and introductory routines. Topics include questionnaire design and survey sampling, forecasting techniques, computational tools and demonstrations.

Definition. The most common definition of bipolar coordinates  $(\rho, \theta)$  is  $\rho = \frac{d_1 d_2}{d_1 + d_2}$  where the  $\rho$ -coordinate of a point  $P$  equals the angle  $\angle F_1 P F_2$ , and the  $\theta$ -coordinate equals the natural logarithm of the ratio of the distances  $d_1$  and  $d_2$  to the foci  $F_1$  (Recall that  $F_1$  and  $F_2$  are located at  $(a, 0)$  and  $(-a, 0)$ , respectively.) Note that  $\rho$  ranges from  $-\frac{a}{2}$  to ...

PROBLEM POSING. Students have asked me, on several occasions, "Is there any math after calculus?" These students have been given the impression that the world of mathematics is both finite and linear (the classic algebra-through-calculus sequence).

A spectral color is a color that is evoked in a normal human by a single wavelength of light in the visible spectrum, or by a relatively narrow band of wavelengths, also known as monochromatic light. Every wavelength of visible light is perceived as a spectral color, in a continuous spectrum; the colors of sufficiently close wavelengths are indistinguishable for the human eye.

An ellipse is a curve that is the locus of all points in the plane the sum of whose distances  $r_1$  and  $r_2$  from two fixed points  $F_1$  and  $F_2$  (the foci) separated by a distance of  $2c$  is a given positive constant  $2a$  (Hilbert and Cohn-Vossen 1999, p. 2). This results in the two-center bipolar coordinate equation  $r_1+r_2=2a$ , (1) where  $a$  is the semimajor axis and the origin of the coordinate system ...

Le pyrrole ou azole, de formule brute  $C_4H_5N$ , est un composé hétérocyclique simple et fondamental de la classe des matalloles, constitué d'un cycle aromatique de 5 atomes dont un atome d'azote. Le pyrrole est un composé aromatique qui possède une réactivité différente du benzène. Il est utilisé en tant que réactif ou précurseur en chimie organique.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

L'ion ammonium de formule brute  $NH_4^+$  est un ion polyatomique de charge électrique positive. Ce cation polyatomique possède une structure tétraédrique, l'atome d'azote  $N$  occupant le centre et les quatre atomes d'hydrogène occupant les sommets équivalents du tétraèdre. Il est obtenu par protonation de l'ammoniac ( $NH_3$ ) ; il est parfois présenté comme une molécule d'ammoniac ionisée.
