cross sectional anatomy of pdf

A cross section of a polyhedron is a polygon.. The conic sections “ circles, ellipses, parabolas, and hyperbolas “ are plane sections of a cone with the cutting planes at various different angles, as seen in the diagram at left.. Any cross-section passing through the center of an ellipsoid forms an elliptic region, while the corresponding plane sections are ellipses on its surface.

Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body in both health and disease. MRI scanners use strong magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI does not involve X-rays or the use of ionizing radiation, which distinguishes ...
