The syntax of the C programming language, the rules governing writing of software in the language, is designed to allow for programs that are extremely terse, have a close relationship with the resulting object code, and yet provide relatively high-level data abstraction. C was the first widely successful high-level language for portable operating-system development.

RF Microwave Wireless High Frequency Application Note

In the C programming language, data types are declarations for memory locations or variables that determine the characteristics of the data that may be stored and the methods (operations) of processing that are permitted involving them.. The C language provides basic arithmetic types, such as integer and real number

types, and syntax to build array and compound types.

C data types - Wikipedia

What is DDD? GNU DDD is a graphical front-end for command-line debuggers such as GDB, DBX, WDB, Ladebug, JDB, XDB, the Perl debugger, the bash debugger bashdb, the GNU Make debugger remake, or the Python debugger pydb. Besides "usual" front-end features such as viewing source texts, DDD has become famous through its interactive graphical data display, where data structures are displayed as ...

Compressed vision. Remember the movie The Matrix, where software agents and trained human operators are able to spot objects and people from endless streams of digital data? Is this really possible? For humans, unlikely. But we have succeeded in training machines to do something like that.
