Demand-responsive transport, also known as demand-responsive transit (DRT), demand-responsive service, Dial-a-Ride transit (DART) or flexible transport services is a form of transport where vehicles alter their routes based on particular transport demand rather than using a fixed route or timetable. These vehicles typically pick-up and drop-off passengers in locations according to passengers ...

Transport or transportation is the movement of humans, animals and goods from one location to another. In other words the action of transport is defined as a particular movement of an organism or thing from a point A to the Point B. Modes of transport include air, land (rail and road), water, cable, pipeline and space. The field can be divided into infrastructure, vehicles and operations.

Parking Management Paradigm Shift. Parking Management represents a paradigm shift, that is a change in the way parking problems are defined and potential solutions Evaluated.. Old paradigm: motorists should nearly always be able to easily find, convenient, free parking at every destination. Parking planning consists primarily of generous minimum parking requirements, with costs borne indirectly ...

It has been reported that a pH gradient exists between intracellular and extracellular compartments in tumors, which results from the rapid proliferation and growth of tumor cells exceeding blood transportation, causing an inadequate supply of nutrients and oxygen, and thus generating lactic acid due to glycolysis []. Given the acidic tumor microenvironment, pH-responsive nanoparticles are ...

The federal government plays a large role in the nation's highways by funding aid programs for the states and imposing top-down regulations. Congress initiated aid to the states for highways in 1916, and it launched construction of the interstate highway system in 1956. In recent decades, the government has continued to expand its role in state and local highway and transportation systems.
