WDM Network Design 7. WDM optical networks: a layered vision • WDM layer fundamentals. • Wavelength Division Multiplexing: information is carried on high- capacity channels of different wavelengths on the same fiber • Switching: WDM systems transparently switch optical flows in the space (fiber) and wavelength domains • WDM layer basic functions.

3.1 Optical network system design 3.1.1 SNR design. In a WDM system such as the one shown in Figure 1, the 2.4 Gb/s or 10 Gb/s modulated optical signals for other equipment are input to the TERM on the transmitter side.

This chapter explores some of the design constraints involved in the WDM network design. Consider an optical signal as a slowly varying signal of amplitude  $A(l, t)$  (function of distance ' $l$ ,' and time ' $t$ '), on which various parameters are acting at all times.

Analysis, Design and Performance Evaluation of Optical Fiber Spectrum-Sliced WDM Systems by Vivek Arya Dr. Ira Jacobs, Chairman Electrical Engineering ABSTRACT This dissertation investigates the design and performance issues of a recently demonstrated technique, termed as spectrum-slicing, for implementing wavelength-division-multiplexing (WDM) in optical fiber systems.
