MATLAB (matrix laboratory) is a multi-paradigm numerical computing environment and proprietary programming language developed by MathWorks. MATLAB allows matrix manipulations, plotting of functions and data, implementation of algorithms, creation of user interfaces, and interfacing with programs written in other languages, including C, C++, C#, Java, Fortran and Python.

Logical flag for censored data, specified as the comma-separated pair consisting of 'Censoring' and a vector of logical values that is the same size as input vector x. The value is 1 when the corresponding element in x is a right-censored observation and 0 when the corresponding element is an exact observation.

What is a cell array? Edit. A cell is a flexible type of variable that can hold any type of variable. A cell array is simply an array of those cells. It's somewhat confusing so let's make an analogy.

Hey, ode15s uses finite differences unless you supply a Jacobian. In fact, the fact that the MATLAB ODE Suite relies on finite differences is the reason that ode23s is only recommended if you supply a Jacobian function because even Rosenbrock-W methods lose accuracy with more inaccurate Jacobian information (while implicit equations just use the Jacobian as a line search).
